WORK EXPERIENCE

Junior Software Engineer **Oct 2023 - Nov 2026**

Proficient Information Systems

- Delivered features for 4 products: Investar OMS, Investar Remittance, Confidence ERP, and Penny Perfect accounting.
- Helped migrate Investar from a monolith to Spring Cloud microservices with Eureka, API Gateway, and Config Server.
- Owned features end to end: design, code review, QA verification, Docker deployment, and production support.

Software Engineer Intern **Apr 2023 - Sep 2023**

ERA Info Tech

- Worked on the General Ledger module team of a Core Banking System and learned core accounting fundamentals.
- Enhanced GL reports and the journal-posting screen: added missing fields and a parent-child tree view for detailed records.
- Built REST APIs with Spring Boot and Oracle Database using layered architecture and dependency injection.

PROJECTS

Investar OMS: Stock Trading Platform **Spring Boot · Spring Cloud · RabbitMQ · Redis · PostgreSQL**

Professional project · Stock trading platform for Dhaka Stock Exchange brokers

- Built real-time DSE market data on the ITCH feed: WebSocket price charts, Redis time-and-sales API, and index sync.
- Hardened order execution with RabbitMQ publisher confirms, sequential consumers, retries, and dead-letter queues.
- Set up Spring Cloud Config with RabbitMQ live refresh, so config changes reach all microservices without restarts.
- Developed back-office APIs for branches, dealers, symbol restrictions, permissions, and bulk XML client import.

Investar Remittance Wallet **Spring Boot · Spring Modulith · Stellar · PostgreSQL**

Professional project · Stellar-based cross-border remittance wallet with MoneyGram

- Automated MoneyGram withdrawal settlement on Stellar with a background poller and transaction state machine.
- Built external wallet linking with signed-challenge verification, plus verified-wallet deposits and withdrawals.
- Enforced Spring Modulith module boundaries and moved balances into a dedicated wallet module with ledger postings.
- Raised integration-test coverage to 80% using Testcontainers PostgreSQL and WireMock.

Modulith E-Commerce Platform **Spring Boot · Spring Modulith · PostgreSQL · Redis · Docker**

Personal project · github.com/Asadujjaman47/modulith-e-commerce-platform

- Built a 13-module e-commerce modular monolith with event-driven communication and boundaries enforced by tests.
- Implemented JWT refresh-token rotation, idempotent orders with stock reservation, Redis caching, and rate limiting.
- Added Prometheus, Grafana, and Zipkin observability; CI/CD with GitHub Actions, CodeQL, Trivy, and GHCR.

EDUCATION

B.Sc. in Computer Science & Engineering

Daffodil International University

CGPA: 3.72

2017 - 2021

Achievements

- Solved 200+ Data Structures, Algorithms, and SQL problems on LeetCode and HackerRank.
- 6th place among 161 teams in the AI for Bangla Competition, ICT Division Bangladesh, 2022.
- Executive Member, DIU Computer & Programming Club; Problem Solving Lab Prefect.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C++

Backend: Spring Boot, REST APIs

Architecture: Modular Monolith, Microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis

Messaging: RabbitMQ, Kafka

DevOps & Cloud: Docker, GitHub Actions, Linux, AWS, Azure

Monitoring: Micrometer, Prometheus, Grafana, Zipkin

Tools: Git, IntelliJ IDEA, VS Code
